

SAVANNAH ENERGY

HEALTH and SAFETY POLICY

Savannah Energy considers that a high standard of Health and Safety performance by everyone who works for or with us is critical to the success of our business. No operation is successful without integrated Safety. Health and Safety are essential requirements of our operations and must rule all of our activities.

The Savannah Health and Safety Policy aims to promote a safe working environment and to protect human health. The Health and Safety Policy aims will be achieved by:

- Complying with all applicable legislation, regulatory requirements and good international industry best practices for safe operations;
- Implementing an efficient Health and Safety Management System to systematically identify, assess and manage Health and Safety issues with the aim of reducing risks to as low as reasonably practicable;
- Leading by example and promoting Health and Safety by maintaining a culture in which each person is clearly aware of and acts upon their Health and Safety responsibilities;
- Developing measurable Health and Safety objectives and key performance indicators as an effective means of monitoring, measuring and improving our Health and Safety performance;
- Expecting our suppliers and partners to share and enforce our Health and Safety values and goals.
